INSIGHT REPORT . GROWTH PLAN

BrightTV Analysis

Growing the subscription base by understanding who watches what, when and why.

Prepared by Priscilla Mbonambi for the CEO and CVM Team · Data: 9,995 sessions · 4,386 users · Jan–Apr 2016 (SAST)

Content

1. Dataset & approach
2. User & usage trends
3. What influences consumption
4. Programming for low-consumption days
5. Initiatives to grow the base
6. Q&A

How we analysed the data

Dataset

- 9,995 viewing sessions
- 4,386 unique users
- Period: 1 Jan – 1 Apr 2016
- Times converted from UTC → SAST (+2h)
- Duration parsed to seconds, aggregated to hours

Approach

- Profile users (age, gender, race, province)
- Profile usage (channel, day, hour, bucket)
- Quantify drivers of consumption
- Identify low-consumption windows
- Translate findings into CVM initiatives

AT A GLANCE

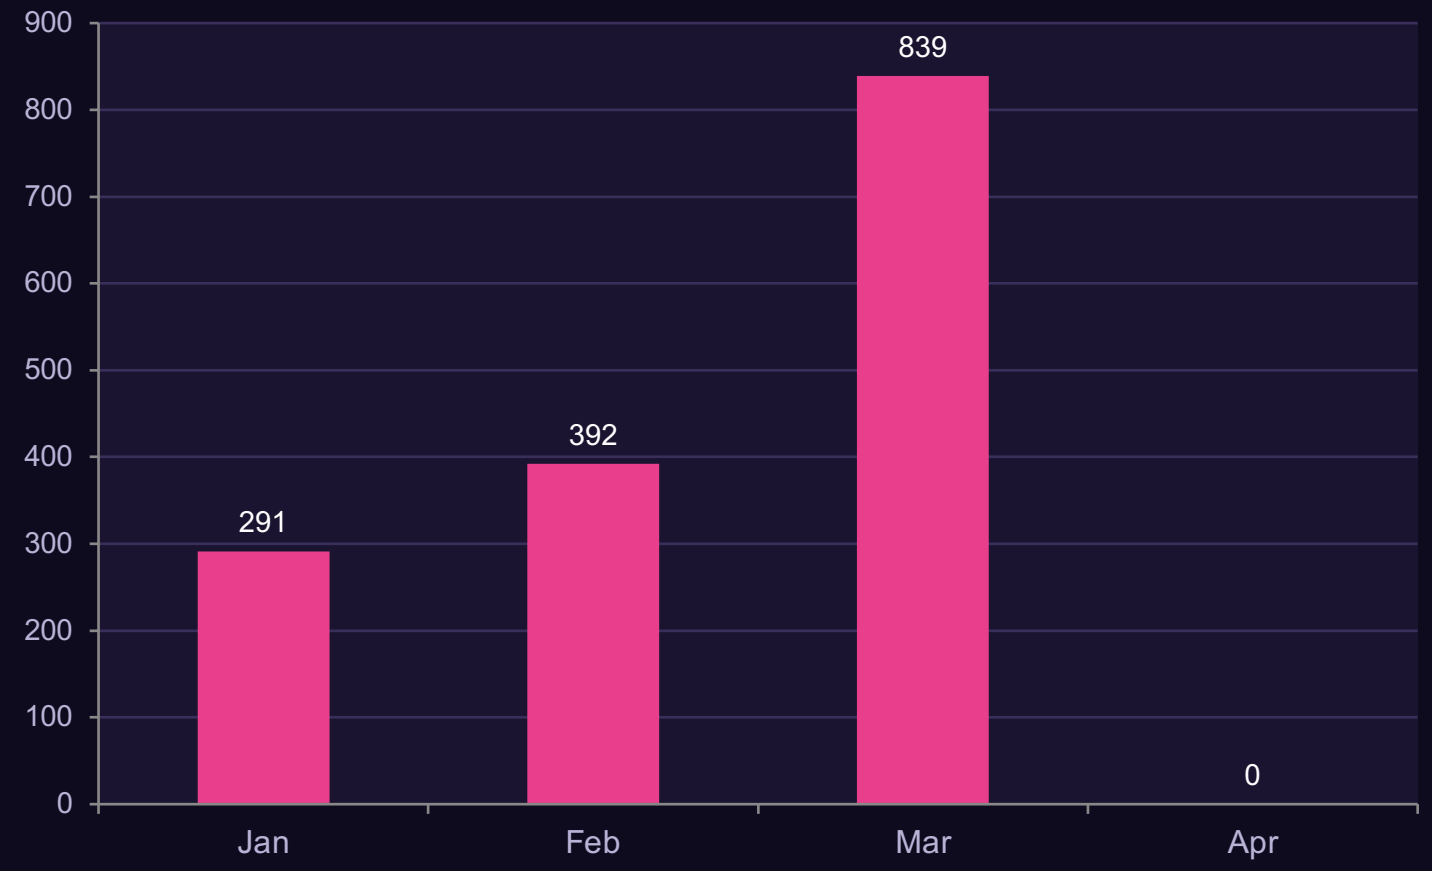
BrightTV in four numbers

SESSIONS	UNIQUE USERS	WATCH HOURS	AVG / SESSION
9,995	4,386	1,522	9.1 min

Headline

BrightTV's audience is real but light: each user averages ~2.3 sessions of ~9 minutes. Only 0.5% are classified as High Consumption. The growth opportunity is therefore not just acquisition — it's depth.

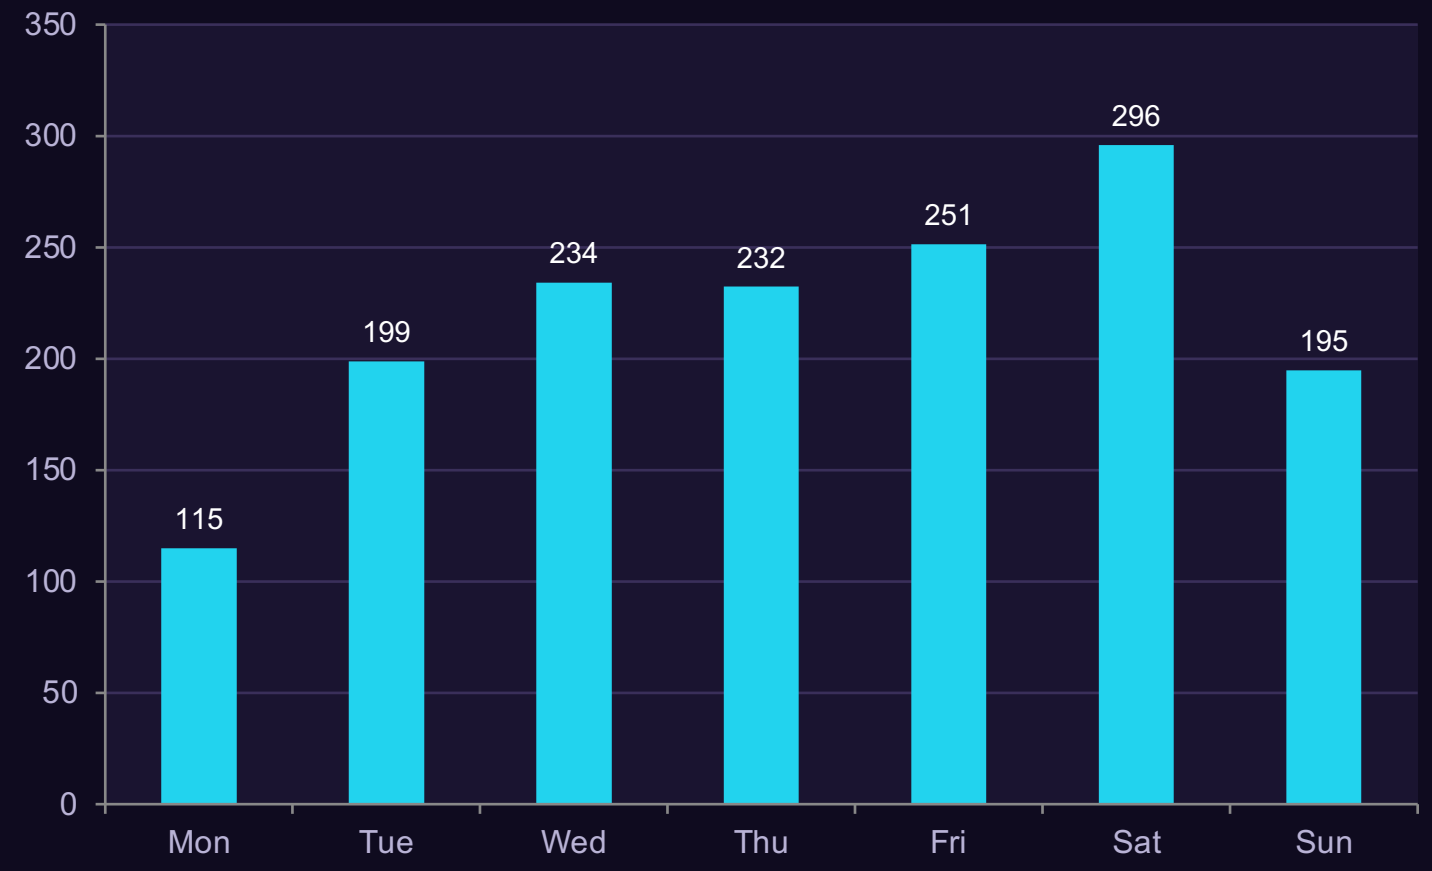
March more than doubled February



Why?

- ICC Cricket World Cup drove a +114% jump from Feb → Mar
- Confirms live sport is BrightTV's #1 engine
- April data is partial (1 day only)

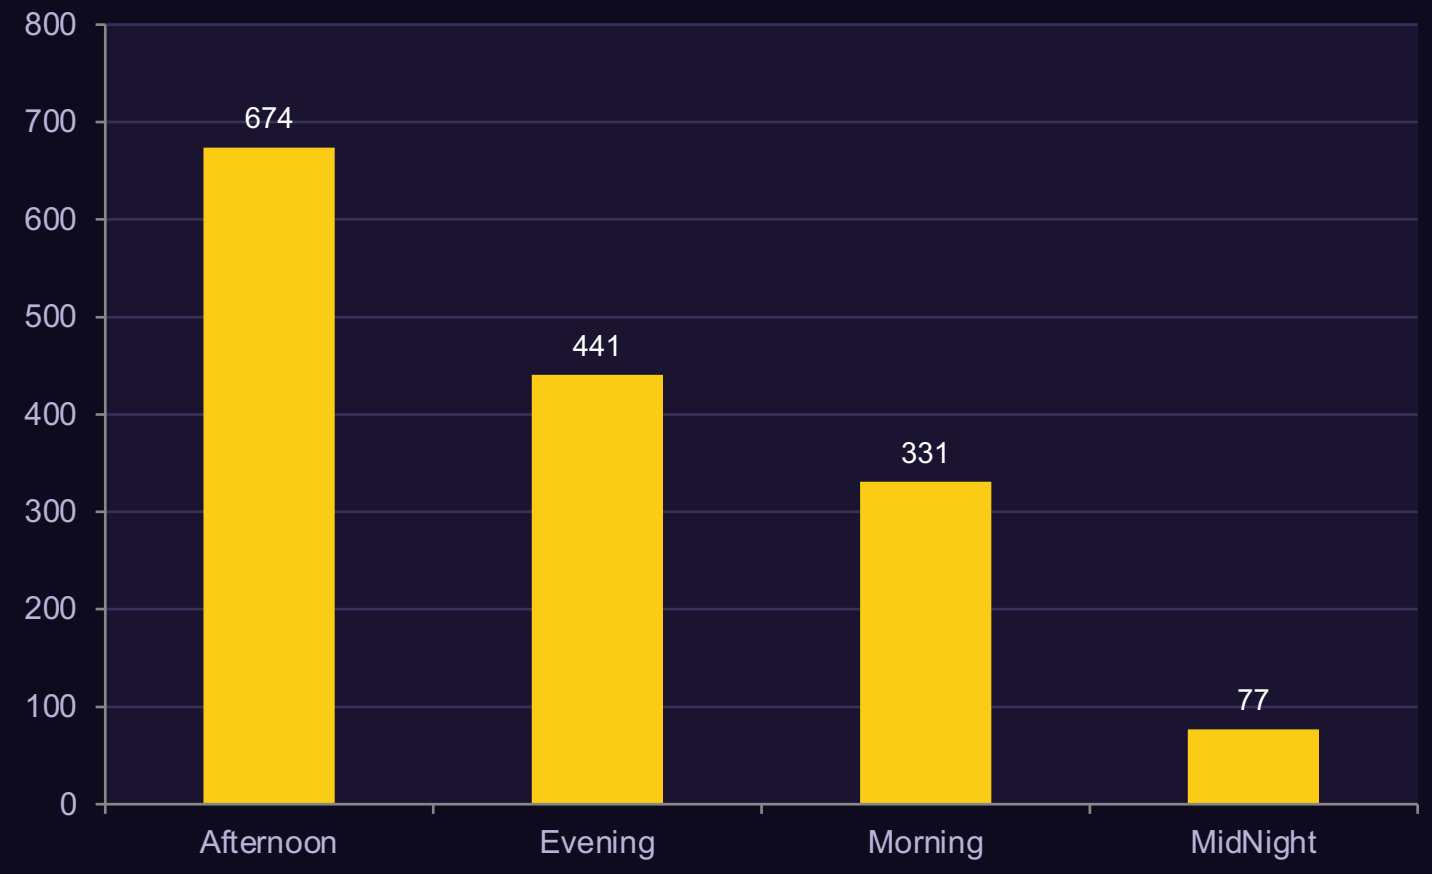
Saturday is king. Monday is the gap.



Read

- Saturday = 296h, longest avg session (10.9 min)
- Monday = 115h — 60% below Saturday
- Mid-week (Tue–Thu) is healthy but flattens
- Implication: programming + push gap on Mondays

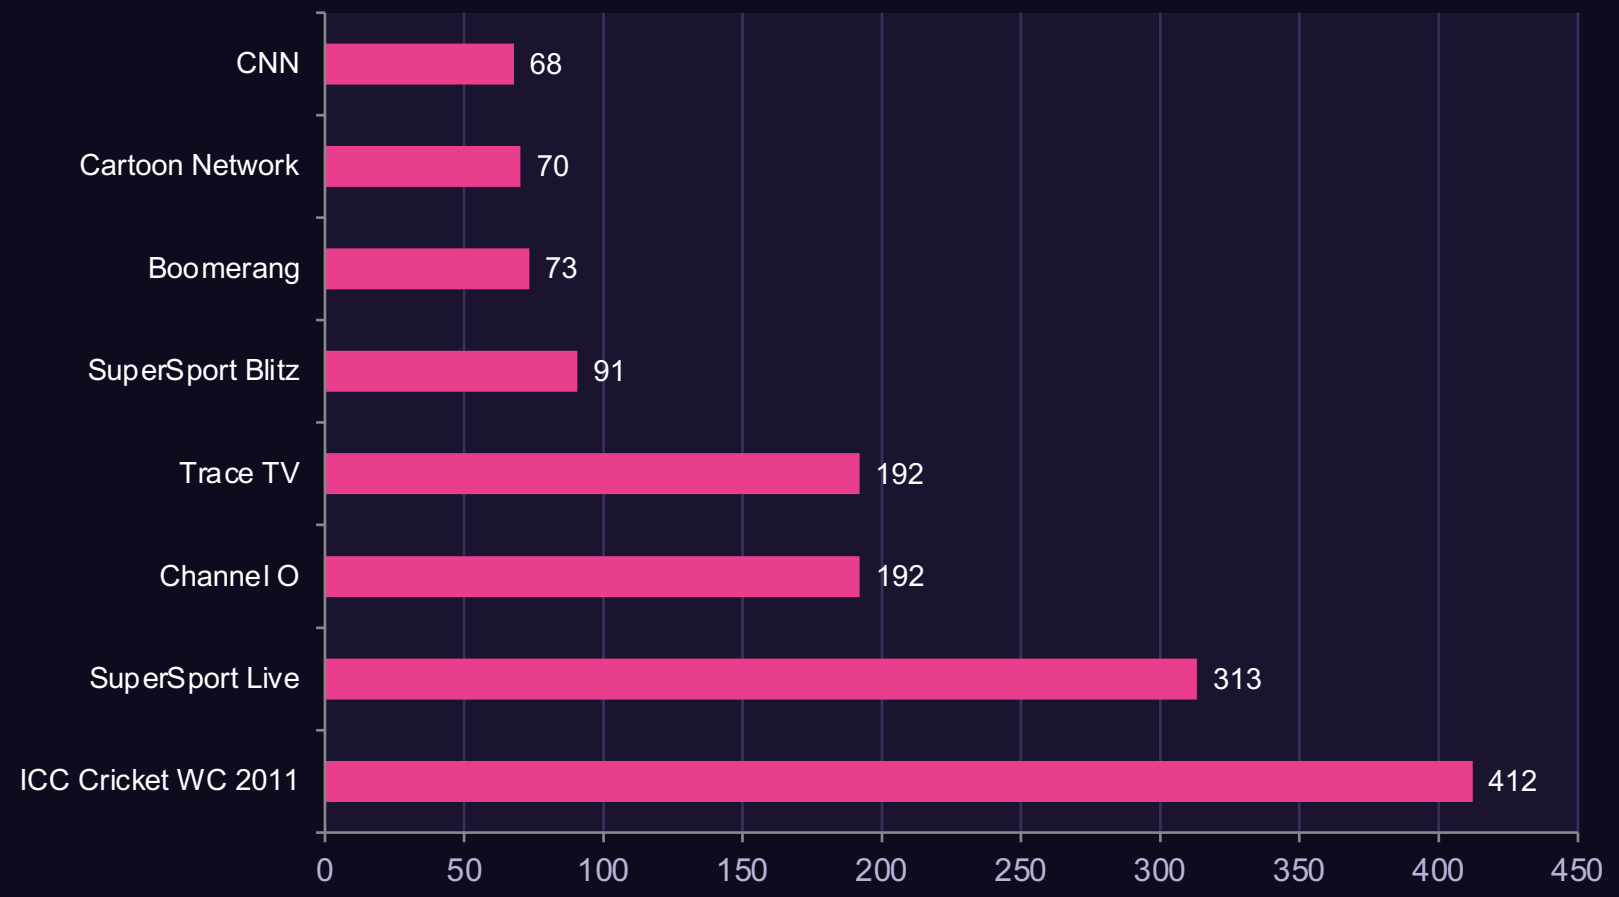
Afternoon + Evening = 74% of all hours



Insight

- Prime window: 14:00–22:00 SAST
- Morning is under-monetised — only 22% of hours
- MidNight (5%) skews to specific channels — niche audience to nurture

Top 8 channels by watch hours

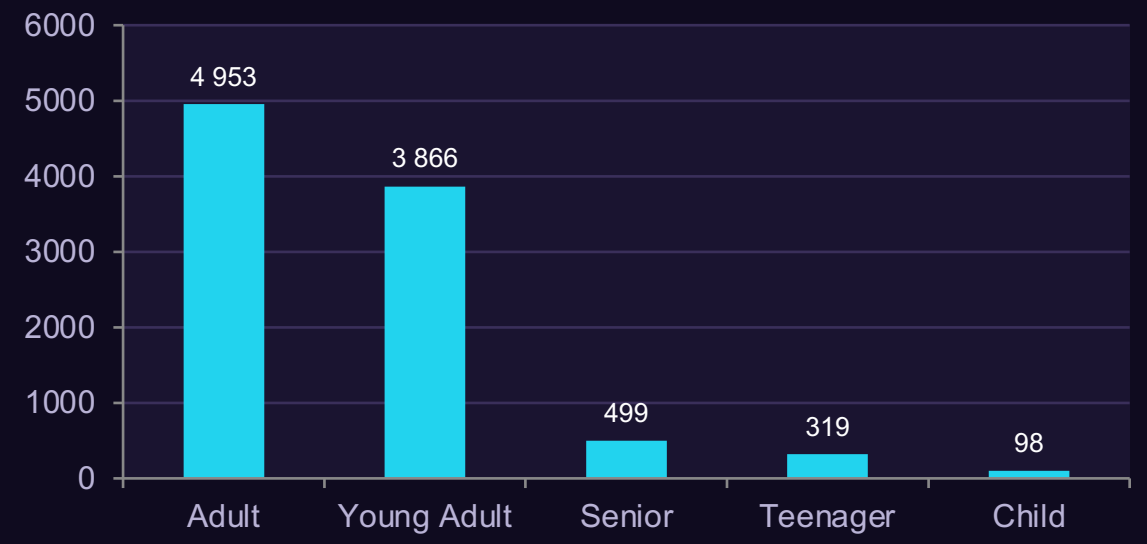


Sport rules

- ICC + SuperSport ≈ 48% of all hours
- Music (Channel O, Trace) #2 cluster
- Kids (Boomerang, Cartoon Network) drive sessions but short ones

Audience skews male, adult, urban

MALE SHARE	ADULTS 25-49	GAUTENG HOURS	CHILDREN SHARE
88%	50%	38%	1%



92% of sessions are Low Consumption

LOW	MEDIUM	HIGH
9,240	703	52

So what?

Only 52 users (0.5%) are super-fans — yet they consume disproportionate hours. Moving the average user one bucket up the engagement ladder is the single highest-leverage CVM lever.

What influences consumption?

GENRE

Sport delivers 2–3× the avg session of news/lifestyle

DAY OF WEEK

Saturday vs Monday: +158% on hours

TIME OF DAY

Afternoon + Evening = 74% of hours

LIVE EVENTS

ICC Cricket alone explains the March spike

DEMOGRAPHICS

Adult males in Gauteng = the heavy core

ENGAGEMENT STATE

92% Low — habit formation is the real ceiling

Filling the low-consumption days

Where to act

- Monday is the weakest day (115h) — a habit / programming gap, not an audience gap
- Mid-week (Tue–Thu) is flat in evening prime time
- Sunday morning under-utilised vs Saturday equivalents
- Morning across all days is under-monetised

What to schedule, when

Monday — biggest win

- Premiere new episodes of weekend sport recap shows
- Monday Movie Night — exclusive premiere window
- Push notification: weekend highlights reel

Tue–Thu evenings

- Local reality + drama in prime time
- Themed nights: Doc Tue · Comedy Wed · Throwback Thu
- Live studio shows tied to current events

Sunday family slot

- Family movie + kids morning block
- Faith / lifestyle for senior segment (now only 4% of hours)
- Live SS / Africa Magic premieres

Sport-led acquisition funnel

Headline

Sport (ICC + SuperSport) created BrightTV's biggest growth wave in March. Engineer that effect on demand.

How

- 7-day free trial during every major tournament
- Auto-conversion offer at end of trial
- Launch a low-ARPU 'Sport Lite' bundle to widen the funnel

Family & female bundle

Headline

88% male, only 4% kids/teen. The household is the fastest path to incremental subscriptions.

How

- Family tier with kid-safe profiles
- Co-market with mobile providers in GP & WC
- Anchor with Africa Magic + Boomerang + lifestyle

Re-engage Low Consumption (92% of sessions)

Headline

If we shift the average user just one engagement bucket, total hours could rise materially without a single new acquisition.

How

- Trigger: <5 viewing minutes in 7 days
- Personalised 'What to watch tonight' push
- Use favourite channel × day-of-week as the recommendation

Geographic expansion

Headline

Limpopo, North West, Northern Cape together = <8% of total hours. Distribution + cost-of-data are the barriers — not appetite.

How

- Province-specific content marketing
- Telco data-zero partnerships
- Vernacular language showcases on Africa Magic / kykNET

Win the morning

Headline

Sessions exist in the morning but they're short. A breakfast block converts habit into engaged daily use.

How

- Commission a 06:00–09:00 morning news/lifestyle block
- Tie to push notifications & calendar reminders
- Bundle with commute-friendly audio / podcast clips

Retention via Engagement Score

Headline

Today only 0.5% of users are High Consumption. Every percentage point shifted = real incremental revenue retained.

How

- Tie loyalty rewards to weekly viewing thresholds
- Exclusive 'super-fan' content drops
- Surface progress in-app: badges, streaks, recommendations

BrightTV's growth wedge in one sentence

Live sport for acquisition, family & female content for breadth, and behavioural CVM to convert the 92% of low-consumption sessions into loyal subscribers.
